

Keurig Green Mountain, Inc.
Conflict Minerals Report

For the reporting period from January 1, 2013 to December 31, 2013

This Conflict Minerals Report (this “Report”) of Keurig Green Mountain, Inc. (the “Company”) has been prepared pursuant to Rule 13p-1 (the “Rule”) promulgated under the Securities Exchange Act of 1934, as amended, for the reporting period from January 1, 2013 to December 31, 2013.

The Rule requires disclosure of certain information when a company manufactures, or contracts to manufacture, products and any of the minerals specified in the Rule are necessary to the functionality or production of such products. The specified minerals, which the Company collectively refer to in this Report as the “Conflict Minerals,” are gold, columbite-tantalite (coltan), cassiterite and wolframite and their derivatives, which are limited to tantalum, tin and tungsten. The “Covered Countries” for the purposes of the Rule and this Report are the Democratic Republic of the Congo, the Republic of the Congo, the Central African Republic, South Sudan, Uganda, Rwanda, Burundi, Tanzania, Zambia and Angola. As described in this Report, certain Conflict Minerals are necessary to the functionality or production of products that the Company manufactures or contracts to manufacture.

Description of the Company’s Products Covered by this Report

This Report relates to products: (i) for which Conflict Minerals are necessary to the functionality or production of the product; (ii) that were manufactured, or contracted to be manufactured, by the Company; and (iii) for which the manufacture was completed during calendar year 2013.

These products, which are referred to in this Report collectively as the “Covered Products,” were identified by the Company’s internal procurement team, with input from the Company’s contract manufacturers who reviewed and identified suppliers who provide us with products or parts that contain metal. The Covered Products identified are the following:

- Die casting
- Electronics
- Hot water tanks
- Metal parts
- Motors
- Plating
- Pumps & valves
- Sheet metal
- Solder
- Valves and switches
- Wiring / hoses/ tubs

The Company's Due Diligence Process

The Company has in good faith conducted a reasonable country of origin inquiry regarding the Conflict Minerals. This country of origin inquiry was designed to determine whether any of the Conflict Minerals used in certain products originated in the Covered Countries and whether any of such Conflict Minerals may be from recycled or scrap sources. The Company also performed due diligence on the source and chain of custody of such Conflict Minerals. The Company's due diligence measures have been designed to conform to the framework in the *Organisation for Economic Co-Operation and Development Due Diligence Guidance for Responsible Supply Chain of Minerals from Conflict-Affected and High Risk Areas: Second Edition*, including the related supplements on gold, tin, tantalum and tungsten (the "OECD Guidance"). Members from the Company's procurement, legal, sustainability and internal audit teams were involved in the due diligence process, which was led by the responsible sourcing team.

The Company included a policy relating to Conflict Minerals (the "Company Policy") in its Responsible Sourcing Supplier Guidelines, incorporating the standards set forth in the OECD Guidance. The Company Policy states in part that the Company is committed to: (1) supporting the aims and objectives of the U.S. legislation on the disclosure of Conflict Minerals; (2) not knowingly procuring Conflict Minerals that originate from facilities in the "Conflict Region" that are not certified as "conflict free"; and (3) ensuring compliance with the Policy. The Company's Responsible Sourcing Supplier Guidelines apply to all aspects of the Company's supply chain and is available at

<http://www.keuriggreenmountain.com/~media/Sustainability/PDF/SupplyChain/KeurigGreenMountainSupplierGuidelines.ashx>.

The Company's supply chain with respect to the Covered Products is complex, and the supply chain includes many third parties between the finished Covered Products and the original sources of the Conflict Minerals. The Company does not purchase Conflict Minerals directly from mines, smelters or refiners, so it must therefore rely on its suppliers to provide information regarding the origin of Conflict Minerals that are included in the Covered Products. Moreover, the Company believes that the smelters and refiners of the Conflict Minerals are best situated to identify the sources of Conflict Minerals, and therefore the Company has taken steps to identify the applicable smelters and refiners of Conflict Minerals in the Company's supply chain.

In compliance with the OECD Guidance, from April 2013 through May 2014, the Company, either directly or through its contract manufacturers surveyed 280 of the Company's suppliers with respect to the origin of the Conflict Minerals, if any, that are included in the Covered Products. The Company provided suppliers with an internal template modeled after the Conflict Minerals Reporting Template as provided by the CFSI (the "CFSI Conflict Minerals Reporting Template"), an initiative of the Electronic Industry Citizenship Coalition, Incorporated ("EICC") and the Global e-Sustainability Initiative ("GeSI"), and instructed suppliers to either return the internally prepared template or the CFSI Conflict Minerals Reporting Template. As it refined its diligence process, the Company began to exclusively provide and request the CFSI Conflict Minerals Reporting Template. For those suppliers that initially completed and returned the internally prepared template, the Company is following up with them to obtain a completed CFSI Conflict Minerals Reporting Template. The Company's contract manufacturers in turn solicited,

on behalf of the Company, responses from suppliers whose part or product may contain a Conflict Mineral and who are direct suppliers to our contract manufacturers.

As of May 21, 2014, of those 280 suppliers surveyed by the Company or its contract manufacturers:

- 20 suppliers affirmed they do not use any Conflict Minerals in the products provided to the Company; the Company believes such reports to be complete and trustworthy;
- 3 suppliers affirmed that a portion of the smelters used by them are active in the CFSI Conflict-Free Smelter Program, but the Company and/or the appropriate contract manufacturer is continuing to work with such suppliers on determining the country of origin for the remaining smelters;
- 206 suppliers provided responses that the Company and/or the appropriate contract manufacturer is continuing to follow-up on (either because (1) the information appeared incomplete, incorrect and/or untrustworthy, and/or (2) additional information is required on the supplier and/or their Conflict Minerals due diligence process, and/or (3) the country of origin data requires validation);
- 5 suppliers provided responses that the Company is currently validating;
- 46 suppliers have not responded; the Company and/or the appropriate contract manufacturer is continuing to follow-up with such unresponsive suppliers.

Upon receipt by the Company, the Company's responsible sourcing team sought to determine whether the responses appeared reasonable based on the part(s) and/or product(s) supplied to the Company. Where appropriate, members of the responsible sourcing team followed up with suppliers and the supplier management team to better understand the part or product. For those suppliers that provided incomplete information, or if further information was needed from a supplier (for example, if the information received appeared incorrect or not trustworthy), the Company or the appropriate contract manufacturer requested further information/detail from such supplier relating to the presence of Conflict Minerals or the smelter information, as applicable. For those suppliers who did not respond to the initial inquiry, the Company and/or the appropriate contract manufacturer sent them a follow-up inquiry to solicit their response.

For suppliers that indicated in their responses that they do use Conflict Minerals in their part(s) and/or product(s) and provided the applicable smelter information, the Company reconciled the reported smelters against the list of certified smelters included in the CFSI Conflict-Free Smelter Program (available at www.conflictreesourcing.org). If the reported smelter was not listed by the CFSI Conflict-Free Smelter Program, or if the Company had insufficient information to confirm that the smelter reported by the supplier was the same smelter on the CSFI certified smelter list, the Company is following up either directly or through the appropriate contract manufacturer with the supplier to obtain additional information about the smelter(s) used.

To date the Company has been unable to verify a significant percentage of the smelters and refiners identified through the due diligence process. Based on the information that was provided by the Company's suppliers and otherwise obtained through the due diligence process, the Company reasonably determined that facilities used to process the Conflict Minerals contained in the Covered Products included 25 smelters and refiners on the CSFI certified

smelter list. Based on the information that was provided by the Company's suppliers and otherwise obtained through the due diligence process, the Company has not been able to identify a large number of smelters and refiners on the CSFI certified smelter list. A list of those uncertified smelters and refiners identified during the due diligence process is included in Annex I to this Report.

Based on the information that was provided by the Company's suppliers and otherwise obtained through the diligence process, the Company reasonably determined that 13 suppliers provide part(s) or product(s) that contain Conflict Minerals that are produced in part from scrap and/or recycled materials; however, none of those suppliers appear to exclusively use Conflict Minerals derived from scrap and/or recycled materials in the Covered Products.

Conclusion

Based on the information obtained pursuant to the due diligence process, the Company does not have sufficient information to describe or identify all facilities used to process or to determine the country of origin of the Conflict Minerals in the Covered Products.

Process Improvement

The Company expects to take the following steps, among others, to improve its due diligence measures and to further mitigate the risk that the Conflict Minerals contained in the Company's products finance or benefit armed groups in the Covered Countries:

- continuing to engage with suppliers to obtain current, accurate and complete information about supply chain;
- encouraging suppliers to implement responsible sourcing and to have them encourage smelters and refiners to obtain a "conflict-free" designation from an independent, third-party auditor;
- directly engaging with the CFSI;
- enhancing the Company's tracking and reporting tools to integrate the GeSI template within its online sustainability metrics management system; and
- continuing to evaluate the Company's due diligence measures to identify more efficient and effective means to obtain current, accurate and complete information about its supply chain.

ANNEX I
Uncertified Smelters and Refiners Identified

Based on the information that was provided by the Company's suppliers and otherwise obtained through the due diligence process, the following smelters and refiners were identified by the Company's suppliers but which the Company has not been able to identify on the CSFI certified smelter list.
